Summary

I'm a motivated cybersecurity student with a passion for network security, ethical hacking, and system administration. Proficient in network configuration and security, troubleshooting Linux and Windows environments, and cybersecurity tools and technologies. Eager to learn new security practices and contribute to real-world projects through hands-on experience.I am seeking an internship to develop my technical skills, gain professional experience, and join a dynamic team.

Experience

Summer Internship, Tek-up — Tunis, Ariana 06/2026 - 08/2026

Built a complete DevSecOps and Cloud Security Pipeline using tools such as AWS, Docker, SonarQube and Trivy.

Final Year Project Internship, Tunisie Telecom — Nabeul 01/2024 - 05/2024

Design and development of a web application that allows employees to submit and track their leave requests, and enables administrators to manage and approve them. Implementation of authentication, role and access rights management, and the database.

Education

Information Systems and Network Security Engineer, Tek-up 2024 - Present

Bachelor's Degree in Software Engineering, Institut Supérieur d'Informatique et de Gestion de Kairouan 2021 - 2024

Projects

DevSecOps & Cloud Security Pipeline

Built an automated Jenkins CI/CD pipeline integrating SonarQube, OWASP Dependency-Check, and Trivy for code quality analysis and vulnerability detection. Containerized an application using Docker and automated deployment on AWS EC2, applying DevSecOps principles and secure credential management.

Technologies: AWS, Jenkins, Docker, SonarQube, Trivy, OWASP Dependency-Check, Grafana, Git.

IP/MPLS Backbone & Network Security Project

Built a complete enterprise network from scratch in GNS3 including IP/MPLS backbone, VPN/VRF segmentation, dual-site redundancy, and end-to-end security covering authentication, monitoring, and firewall policies

HA-WAF Security Architecture Project

Built a containerized high availability web application firewall combining HAProxy, Keepalived, and ModSecurity with OWASP CRS. Integrated a full-stack .NET/Angular/PostgreSQL application behind the security edge with zero database exposure. Implemented ISO 27001:2022 compliance controls with automated testing for attack prevention and failover validation.

Design and Implementation of a SOC Lab

Simulation of a SoC architecture to test protection against cyber threats using technologies such as PFsense, Suricata and Wazuh

Skills

Tools: AWS, Docker, Wazuh, PFsense, Suricata, Trivy, Grafana
Frameworks: ISO/IEC 27002:2022, OWASP , MITRE ATT&CK
Technical: SIEM Operations, Log Analysis, Threat Intelligence,

Certifications

eJPT (eLearnSecurity Junior Penetration Tester)

Certified CyberDefender Level 1 (CCDL1), (Currently Studying)
